

3M SYSTEM CHECKLIST - 30SEC

*Use this checklist as a cheat sheet when backtesting, **DO NOT** progress to the next timeframe until **ALL** of the points are checked off for the previous timeframe.*

12H:

- Check model ONLY if 2h and 4h are both advanced, otherwise not needed

2H & 4H Timeframe:

- Model/structural bias
- 6 breaks up/down max

30min Timeframe:

- Model (same as higher tf bias)
- 6 breaks up/down max
- Supply/Demand zone tap (30min or 8min)

8min Timeframe:

- Model (same as higher tf bias)
- 6 breaks up/down max
- Supply/Demand zone tap (30min or 8min)
- Type 1 /Type 2 Validation
- Make sure swing rule has not invalidated
- Not overextended from 20 MA (Keltner channels)
- MAs not fully against bias
- Either 20MA or 50MA slope has to favour trade (New rule)

30sec Timeframe: (these need to be valid at time of entry, meaning you can place an order before one of them is fully valid)

- Determine stage (look for most recent stage 1/no stage)
- Not more than 4 breaks up/down
- 20 & 50 MA are not overextended from the 200
- MAs are not fully against bias

Extra rules:

- Once in a trade, move SL to BE once price hits 2RR
- If using ATR TP method, full TP is at 12x ATR
- Max loss rule of 2 losses per session per instrument on 1min & 30sec, 3 losses per session on 15sec

Trailing

- If trailing, move SL behind structural breaks only if the 50MA is above it at the time of the break
- Only trail behind every second break not the most recent one
- Can trail intermediary breaks, same thing with needing 2 breaks to trail
